Evli Research Partners Plc ("ERP") uses 12—month target prices. Target prices are defined by utilizing analytical techniques based on financial theory including (but not limited to) discounted cash flow analysis and comparative valuation. The selection of valuation methods depends on different circumstances. Target prices may be altered on the basis of new information coming to light in the underlying company or changes in interest rates, changes in foreign exchange rates, other securities prices or market indices or outlook for the aforementioned factors or other factors that may change the conditions of financial markets. The valuation assumptions used are sensitive to changes and can significantly affect fair values. A change of a single percentage point in any used assumption could affect fair values by more than +/-20%. Recommendations and changes by analysts are available at Analusts' recommendations and ratings revisions.

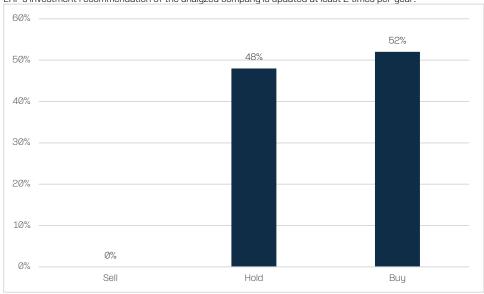

Investment recommendations are defined as follows:

Target price compared to share price

< -10 % -10 - 0 % 0 - (+10) % > 10 % Recommendation SELL RECUDE ACCUMULATE BUY

ERP may temporarily suspend the rating and, if applicable, the target price to comply with regulations and/or firm policies, in which case a NOT RATED classification is used.

ERP's investment recommendation of the analyzed company is updated at least 2 times per year.

The graph above shows the distribution of ERP's recommendations of companies under coverage on the 23rd of October, 2024. If recommendation is not given, it is not mentioned here. As ERP is currently updating its ratings methodology, the graph will be updated in due time to reflect the changes.
